

## Press Release Simtec Systems November 21, 2019

### Presentation of the new Simtec HEXaFLITE<sup>®</sup> 2.0 concept at IAAPA Expo 2019

**Simtec Systems presented its new HEXaFLITE<sup>®</sup> flying theater concept at IAAPA Expo in Orlando:  
HEXaFLITE<sup>®</sup> 2.0.**

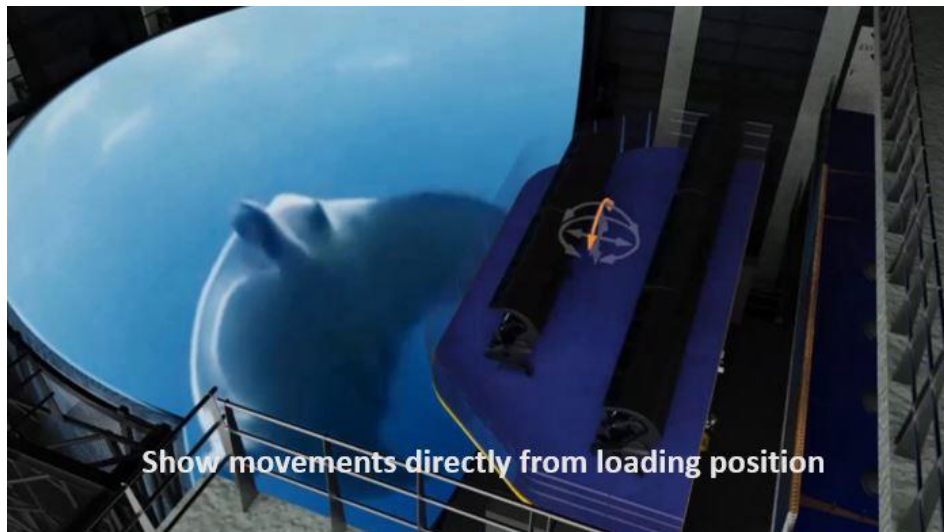

**The new concept was presented to press representatives and invited guests during an official press conference at the Simtec IAAPA booth in Orlando.**

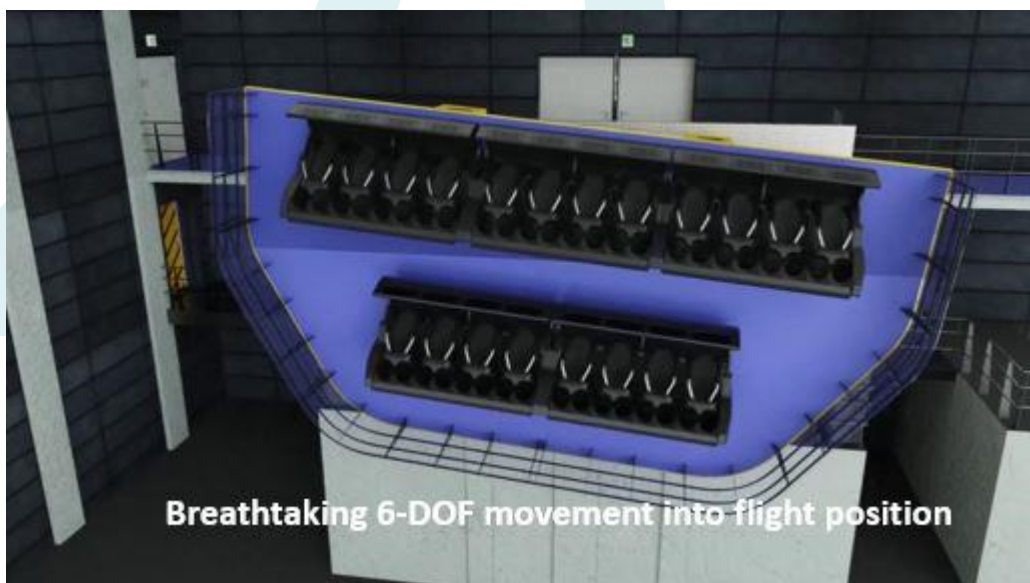

Press conference at Simtec booth: Presentation of HEXaFLITE<sup>®</sup>2.0  
Speaker: Bernd Kaufmann, CEO, Simtec Systems

With more than 15 successful HEXaFLITE<sup>®</sup> installations worldwide, our engineers were faced with the challenge of developing an even more spectacular HEXaFLITE<sup>®</sup> system. The new design incorporates technology which has been proven over many years (like 6-DOF motion etc.) and based on this, our engineers have developed a new state of the art flying theater. Newly developed additional features make the flight even more exciting – incomparable to other Flying Theaters.

The new system design of the HEXaFLITE<sup>®</sup> 2.0 allows starting the 6-DOF motion and tilting the seats backwards while the guest platform remains in the loading position. This further option is an extended screen in the ceiling area giving the guests the impression that they are looking into the sky.

The new concept offers full motion with six degrees of freedom in any tilting position. Starting the motion in loading position and continuing the motion while moving into show position vastly expands the opportunities for creating new experiences.

The 2.0 version of the Simtec HEXaFLITE® can be offered in sizes from 20 to 80 seats and all seats are provided with individual integrated special effects to enhance the guest experience.
